

## Week 2: Moat Identification

Identify which of your current activities are structurally un-automatable.

### Instructions

Review your Week 1 task log. For each Layer 4-5 activity, determine whether an AI system could do it without a human in the loop. If not — identify WHY not.

### Moat Assessment

RANK	ACTIVITY	WHY UN-AUTOMATABLE	TIME/WEEK	ORG VISIBILITY
1				High / Med / Low
2				High / Med / Low
3				High / Med / Low
4				High / Med / Low
5				High / Med / Low

### Moat Category Classification

For each moat above, classify the reason it resists automation:

CATEGORY	APPLIES TO MOAT #
Relationship-dependent (trust, history, personal credibility)	
Accountability-dependent (personal liability, sign-off authority)	
Ambiguity-dependent (no clear "correct" answer exists)	
Context-dependent (requires institutional/unwritten knowledge)	
Ethical-dependent (values-based judgment required)	

Your strongest moats are those with HIGH organizational visibility AND a clear un-automatable category. These are your career insurance.
